

Technical & space requirements

Rigging time: 1 hour to test the rigging set up

Set-up time: 10-15min

Take-down time: 5 minutes

Space required: - Circle of approx 5-6 metres radius (depending on anchor points available)
- Ground needs to be reasonably flat
- 5 metres clear height

Other requirements: - The show is based around a chinese pole (4.8 metre high pole, coated in rubber) which needs three fixed anchor points (within 4-5 metres radius of the pole) near ground level that can be loaded up to 120kg each (example: beams, railings etc), in the absence of structural features the anchor points can be created using weights (sandbags, stage weights, water weights)
- There must be 120 degrees between each point (if looking from where the base of the pole would be placed they must approximately make an equilateral triangle).
- Vehicle access to the site/venue
- Parking space for a van (i.e. no height restriction)
